Education

VIT-AP University | Current CGPA : 8.16 — **August 2022 - Present**

Integrated MTech in Computer Science — *Amaravati, Andhra Pradesh*

Sri Chaitanya Junior College | Marks : 950/1000 — **June 2020 - July 2022**

Intermediate MPC — *Nellore, Andhra Pradesh*

Technical Skills

Languages: Java (Data Structures), Python

Frameworks & Libraries: TensorFlow, scikit-learn, NumPy, Pandas, Matplotlib, React, Node.js

Tools & Platforms: Docker, Git, GitHub, VS Code, Google Cloud Platform

Core Concepts: Data Structures & Algorithms, OOP, Multithreading, Exception Handling, Memory Management, OS

Software Development: SDLC, Software Design, Coding, Debugging

Projects

Resume Intelligence Engine | *Python, Flask, NLTK, SpaCy, React, Text Extraction, Data Preprocessing*

- Built a document intelligence system capable of extracting structured candidate information from unstructured PDF and DOCX resumes using **NLP** pipelines and entity recognition.
- Developed automated preprocessing, text extraction, and information extraction workflows achieving **80% extraction accuracy** across multiple resume formats.
- **GitHub** - keepudihemanth/Resume-Parsing-app | keepudihemanth/Resume-Parser-Model

Mini-Weather-Benchmark | *Python, Pandas, NumPy, scikit-learn, EDA, Machine Learning*

- Performed **data cleaning, preprocessing, and exploratory data analysis (EDA)** on historical weather data to identify trends and key factors influencing temperature variations.
- Developed and evaluated machine learning models (**Linear Regression, Random Forest**) using metrics like **MAE and RMSE** to build a data-driven benchmarking system for prediction accuracy.
- Generated **visual insights and comparative analysis** to support decision-making, demonstrating the ability to translate raw data into actionable analytical solutions in an Agile-based workflow.
- **GitHub** - keepudihemanth/Mini_Weather_Benchmark

QNN-Based Heart Disease Predictor | *Python, Qiskit, PennyLane, React*

- Built an interactive web application that accepts 11 clinical input parameters and delivers real-time binary heart disease predictions (0 = No Disease, 1 = Disease).
- Trained and validated a quantum-inspired neural network **(QNN)** on patient health data, achieving **86% prediction accuracy**, enabling reliable classification of heart disease risk.
- Integrated a quantum-inspired neural model for patient data analysis and built a scalable backend API service to manage prediction requests, execute model inference, and return diagnostic insights to the web application.
- **GitHub** - keepudihemanth/Heart-Disease-Predictor-Web | keepudihemanth/Prediction-Model

Other Activities

- Participated in multiple **technical hackathons**, designing and implementing working prototypes and presenting technical solutions to peers and judges within short timelines.
- **Marketing Team Member**, University Technical Club - GeeksforGeeks VIT-AP; coordinated planning and promotion of technical events and workshops.
